Implementing Cisco Multicast

The Cisco authorized course **MCAST - Implementing Cisco Multicast** teaches you the fundamentals of IP multicasting, including multicast applications, sources, receivers, group management, and IP multicast routing protocols such as Protocol Independent Multicast (PIM) used within a single administrative domain. You will learn about issues in switched LAN environments and reliable IP multicasting, and technical solutions for simple deployments of IP multicast within a provider or customer network. The course reviews the configuration and troubleshooting guidelines for implementation of IP multicast on Cisco® routers. Labs offer hands-on experience to help you prepare to deploy IP multicast successfully.

Cisco Continuing Education programme is a flexible offer dedicated to all active people who have certificates on Associate, Specialist and Expert level.

Learn more how you may recertify as part of CE to keep certification status active.

[Cisco Continuing Education Program - CE](#)

Taking part in authorised training allows you to obtain extra points necessary to maintain certification.

MCAST: 40 points CE

Purpose of the training

The training is aimed at:

- Network professionals
- Systems engineers
- Partners
- Customers

Benefits of completing the training

This course will help you:

- Gain a solid understanding of the fundamentals of IP multicasting
- Understand the configuration and troubleshooting guidelines for implementation of IP multicast on Cisco routers
- Prepare to deploy IP multicast within a provider or customer network

Expected Listener Preparation

We recommend that you have the following knowledge and skills before taking this course:

- Work experience and configuration skills for Cisco routers and LAN switches

Knowledge included in the ENCOR, ENARSI trainings

Training Language

- Training: English
- Materials: English

Training Includes

5 days with hands-on lab practice

Duration

5 days / 35 hours

Training agenda

After taking this course, you should be able to:

- Describe IP multicast services
- Identify IP multicast issues on a data link layer
- Explain why Protocol Independent Multicast Sparse Mode (PIM-SM) is the most current scalable IP multicast routing protocol
- Describe Rendezvous Point (RP) distribution solutions
- Recognize the drawbacks of the PIM-SM and describe two extensions to provide possible solutions
- Explain basic concepts of Multiprotocol BGP (MP-BGP) and its use in the IP multicast environment
- Configure and deploy Multicast Source Discovery Protocol (MSDP) in the interdomain environment
- Describe solutions to mitigate security issues in the IP multicast network
- Describe the process of monitoring and maintaining multicast high-availability operations
- Design multicast-related application and network solutions in customer and service provider networks

Outline

- Course Introduction
- IP Multicast Concepts and Technologies
 - Introducing IP Multicast
 - Understanding the Multicast Service Model
 - Defining Multicast Distribution Trees and Forwarding
 - Reviewing Multicast Protocols
- Multicast on the LAN
 - Mapping Layer 3 to Layer 2
 - Working with Cisco Group Management Protocol
 - Using Internet Group Management Protocol (IGMP) Snooping
- PIM Sparse Mode
 - Introducing Protocol Independent Multicast Sparse Mode
 - Understanding PIM-SM Protocol Mechanics
 - Using PIM-SM in a Sample Situation
 - Configuring and Monitoring PIM-SM
- Rendezvous Point Engineering
 - Identifying RP Distribution Solutions
 - Implementing Auto-RP
 - Using PIMv2 Bootstrap Router (BSR)
 - Using Anycast RP and MSDP
- PIM Sparse Mode Protocol Extensions
 - Introducing Source-Specific Multicast (SSM)
 - Configuring and Monitoring SSM
 - Reviewing Bidirectional PIM
 - Configuring and Monitoring Bidirectional PIM

- Multiprotocol Extensions for BGP
 - Introducing MP-BGP
 - Configuring and Monitoring MP-BGP
- Interdomain IP Multicast
 - Examining Dynamic Interdomain IP Multicast
 - Explaining Multicast Source Discovery Protocol
 - Using MSDP Source-Active (SA) Caching
 - Configuring and Monitoring MSDP
- IP Multicast Security
 - Introducing IP Multicast and Security
 - Securing a Multicast Network
- Multicast Optimization and High-Availability Features
 - Using Multicast Optimization and High-Availability Features
- Applications of Multicast
 - Exploring IP Multicast and Video Applications
 - Using IP Multicast in Mission-Critical Environments
 - Exploring How Enterprise IT Uses IP Multicasting Globally

Lab outline

- Layer 2 and Layer 3 Multicast
- PIM-SM Protocol Basics
- PIM-SM Protocol Mechanics and Timers
- PIM Sparse-Dense Mode and Manual RP Configuration
- Configuring Dynamic RP Information Distribution
- Bidirectional PIM
- Source-Specific Multicast
- Anycast RP, External MP-BGP, and MSDP Peering
